PART2-CENTRAL PROCESSORS AND INTEGRAL EQUIPMENT

CENTRAL PROCESSOR MOUNTING BOX

Standard Features
The common standard features of the $\mathrm{P} 852 \mathrm{M} / \mathrm{P} 856 \mathrm{M} / \mathrm{P} 857 \mathrm{M}$ central processors are given below:

- 16 hardware registers, 14 of which are programmable.
- asynchronous general purpose bus control
- 63 interrupt levels
- internal interrupt for link to monitor
- DMA facility; allows character handling and packing.
- power supply.
- direct access (read/write) for up to 256 external registers
- addressing facility for up to $32 k, 16-b i t$ words.
- Interface for optional bootstrap loader
- Control panel
- mounting box with 4 slots (P852M, P856-100 series) or 6 slots (P852M-200 series), or 10 slots (P852M, P856M, P857M-400 series), or 17 slots (P857M-500 series).
- telescopic slides.
- documentation.

Also as standard for the $P 856 \mathrm{M}$ and P 857 M processors are the following:

- V24 serial interface unit.
- memory interleaving facility.
- automatic diagnostic facility.
- power failure automatic restart.
- real time clock, line frequency.
- IPL

For the P857M also provided as standard is a memory management unit, contained on a board which mounts in a dedicated location immediately underneath the CPU. This facility allows addressing beyond $32 k$, dynamic relocation and memory protect. A general purpose Initial Program Loader is provided as standard with the P856M and P857M.

P857M option: Floating Point Processor P857M-020.

The P852M is provided with a standard instruction set (with simulated Multiply/Divide instructions) and the P856M with the same instruction set but including Hardware Multiply/Divide instructions. The P857M is provided with an extended standard instruction set including Hardware Multiply/Divide and Memory Management instructions.

The physical details of the processors are shown in Figures 1.1 to 1.4

## Main Variants

The main variants for the processors are summarized in Table 1.1.

The memory modules (all 16-bit words) available are as follows: P852M-004 4k (cycle time $1.2 \mu \mathrm{sec}$ ) - Used on P852M/P856M P843-108 8k (cycle time $1.2 \mu \mathrm{sec}$ ) Used on P852M/P856M P843-116 16k (cycle time $1.2 \mu \mathrm{sec})$ - Used on P852M/P856M P843-216 16 k (cycle time $0.7 \mu \mathrm{sec})-$ Used on P856M/P857M (provides interleaing facility)

## Options

P843-020 I/O processor High Speed Multiplex data channel Automatic control of all data transfers. Maximum throughput 1.2M words/sec. Up to 8 I/0 processors can be connected to the CPU. Includes 3. O metre break lines cable.

P843-052 General purpose initial program loader(ROM). Mounted on P852M GPU board.

P852M-023 A special purpose CPU board which can be supplied for all variants of the P852M. The board includes the following features:

- power failure/automatic restart.
- real time clock(line frequency).

Table 1.1. Central Processor - Main Variants

- control unit for an ASR 33 teletype.
- generał purpose bus connectors.
- internal interrupt for link to monitor plus ASR 33.
-interface to full control panel.
-interface for optional general purpose initial program loader(P843-052)

## Power Supplies

The power available from the internal power supply for the CPU board, the memory, and to the slots for I/O processors and I/O cards is as shown in Table 1.2.

Table 1.2 Total Power Available from Power Supply

| Supply Volts | Current(100 and <br> 200 series) | Current(400 series) | Current(500 <br> series) |
| :---: | :---: | :---: | :---: |
| +5 | 18 A | 43 A | 86 A |
| -5 | 0.8 A | 2.0 A | 4.0 A |
| +16 | 4.5 A | 9.0 A | 18 A |
| +18unreg | 1.0 A | 2.0 A | 4.0 A |
| -18 unreg | 1.0 A | 2.0 A | 4.0 A |

The remaining +5 V supply current available at the free connectors of the mounting boxes is shown in Table 1.3.

Note: The whole of the +18 V and -18 V power as listed in in Table 1.2 is available.

Table 1.3. Remaining Power Available at Free Connectors

| Type No. | Current Available(From +5V) |
| :---: | :---: |
| P852M-101 | 5.2 A |
| -102 | 5.1 A |
| -103 | 4.4 A |

Table 1.3 cont.

| Type No. | Current Available From +5V) |
| :---: | :---: |
| P852M-201 | 8.2 A |
| -202 | 8.1 A |
| -203 | 7.4 A |
| -402 | 33.1 |
| -403 | 32.4 |
|  |  |
| P856M-102 | 5.2 A |
| -103 | 4.5 A |
| -106 | 4.5 A |
| -402 | 30.2 A |
| -403 | 29.5 A |
| -406 | 29.5 A |
|  | 23.5 A |
| P857M-405 | 65.7 A |

The power consumption in amperes for different sizes of memory is given in Table 1.4 below:

Table 1.4 Power Consumption of Memories

| Core Size | Speed | Supply |  |  | Voltage. of Modules |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mu$ sec | +5 V | -5 V | +16 V |  |  |
| 4 k | 1.2 | 2.5 | 0.2 | 3.6 | 1 |  |
| 8 k | 1.2 | 2.6 | 0.2 | 3.6 | 1 |  |
| 12 k | 1.2 | 5.3 | 0.4 | 4.0 | $2(4 \mathrm{k}+8 \mathrm{k})$ |  |
| 16 k | 1.2 | 3.2 | 0.4 | 3.7 | 1 |  |
| 24 k | 1.2 | 6.1 | 0.6 | 4.2 | $2(8 \mathrm{k}+16 \mathrm{k})$ |  |
| 32 k | 1.2 | 6.7 | 0.8 | 4.3 | $2(16 \mathrm{k}+16 \mathrm{k})$ |  |
| 16 k | 0.7 | $4.5^{\#}$ | $0.4^{\#}$ | 5.7 |  |  |

Note: ${ }^{\text {F }}$ Indicates maximum current consumption

## Environmental Requirements

The environmental conditions specified below apply to all the central processors and also to the integral equipment defined in further chapters in this Part of the manual; the extended limits quoted for transit and storage only apply if the equipment is
correctly packaged.

Temperature_Range

| Operating | $0^{\circ} \mathrm{C}$ to $45^{\circ} \mathrm{C}$ |
| :--- | ---: |
| Non-operating | $-30^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ |
| Transit or storage | $-30^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ |

Humidity_Range_

| Operating | 0 | to $85 \% r \cdot h$. |
| :--- | :--- | :--- |
| Transit or storage | 0 | to $100 \% r . h$. |

## Maximum Vibration

The following conditions apply during operation,non-operation, storage and transit and are as defined in BEAMA standard 209/2.5/69 group II requirements.

Frequency $\quad 10-150 \mathrm{~Hz}$
Acceleration $\quad 0.5 \mathrm{~g}$
Amplitude $\quad 0.75 \mathrm{~mm}$ peak to peak

## Standard and Mini Control Panels

The Full Control Panel ( 2 U high) shown in Figure 2.1 is provided as standard with all P 852 M and P 856 M processors. The panel contains switches and indicators which allow an operator or programmer to load, display, run and supervise a progrem. The central processors can also be equipped, on option,with a mini-panel (P852M-030) shown in Figure 2.2 .

Extended Panel (P856M-032 4U high)
An Extended Panel, as shown in Figure 2.3., is provided as standard for $P 857 \mathrm{M}$ processors and can be provided, as an option, for P856M-400 series processors. This panel contains, on the lower half, the switches and indicators as described for the Full Control Panel and on the upper half switches and indicators for the simultaneous control and display of data and address and stop on pre-set address.

Portable Control Panel
A Portable Control Panel (P849-052) is available which contains all the facilities of a standard Full Control Panel and is fitted with a connector which enables it to be fitted in place of a standard full control panel or mini-panel; the panel is used mainly for servicing purposes.

A control panel is shown disconnected from the basic mounting box in Figure 2.4.

FIG. 2.4 CONTROL PANEL-DISCONNECTED

The I/O Cards are located in the general purpose slots of the basic mounting box but where there are too many of them to be accommodated the G P bus is extended, using a transmission line of two flat cables of 50 ways each, thus enabling additional cards to be contained in separate equipment shelves (described in Chapter 4.). Each shelf contains its own power supply for the cards it contans. Multicard peripheral controllers are also separately housed in this manner to form self contained units complete with power supplies.

The GP bus extension and equipment shelf facilities are described in Chapter 4 as are the cables and panels relating to data communications.

Table 3.1. at the end of this chapter lists the I/O controllers discussed showing the I/O channels to which they may be connected, also the number of device addresses and interrupt lines.

## Peripheral Control Units

Except where otherwise stated each of the following control units occupies one I/O slot either in the basic mounting box or in a separate card chassis. The associated signal cables and connectors are supplied with the peripheral units - see Part 3 Peripherals. Note: The control units are identified as type 1 or 2 units. Type 1 units are constructed on boards having overall dimensions $421 \mathrm{~mm} \times 371.5 \mathrm{~mm}$ which connect directly to the GP bus and type 2 units on boards having overall dimensions $208 \mathrm{~mm} x$ 310 mm which are connected to the GP bus via a bus translator (details of the bus translator are given in Chapter 4 of this part).

P824-040 Disc Control Units

| P801-040 | Control unit for punched tape reader P801-001 or |
| :---: | :---: |
| (type 1) | P802-001. |
|  | It requires the following d.c. supply: |
|  | +5V $\quad 1.3 \mathrm{~A}$ |
| P810-040 | Control unit for lineprinter P809-002, |
| (type 1) | P811-001 or P812-001. |
|  | It requires the following d.c. supply: |
|  | $+5 \mathrm{~V} \quad 0.7 \mathrm{~A}$ |
| P845-040 | Control unit for the transfer of serial data with |
| (type 1) | CCITT V24 and V28 interface. Speed selectable |
|  | from 110, 150, 200, 300,600, 1200,2400,4800 and 9600 |
|  | bits/second. |
|  | It requires the following d.c. supplies: |
|  | +5V 1.9A |
|  | +18V 0.045A |
|  | -18V 0.04A |
| P824-040 | Control unit for two P824-002 moving head disc |
| (type 1) | units. |
|  | It requires the following d.c. supply: |
|  | $+5 \mathrm{~V} \quad 4.0 \mathrm{~A}$ |
| P825-040 | Control unit for 2 P825-007 moving head disc |
| (type 1) | units. |
|  | It requires the following d.c. supply: |
|  | +5 V 6.0A |
| P831-040 | Control unit for either four P831-002, four |
| (type 2) | P831-004 or four P831-006 tape transports daisy- |
|  | chain connected to either a P831-010, P831-020 or |
|  | P831-030 tape formatter - See Part 3. The control |
|  | unit comprises 2 cards which together with a |
|  | P849-020 (RD1) or P849-021 (RD2) rectifier and a |
|  | P849-322 (RG4) stabilizer card to provide the |
|  | necessary d.c. supplies and a P843-007 or P843-008 |
|  | bus translator card for connection to the GP bus |
|  | are housed in a multicard equipment shelf to form |
|  | a self contained unit. |

| P845-070 | Asynchronous medium speed line multiplexer for |
| :--- | :--- |
| AMA 8C | 8 asynchronous device connections 50 to 9600 bits |
|  | per second with current loop interface $(20 \mathrm{~mA})$ |
| or TTL interface. |  |
| It requires the following d.c. supplies: |  |
| +5 V | 4.5 A |
| -18 V | 0.1 A |

P844-060 Asynchronous low speed line multiplexer for 16 HDX
AMA 16

P844-110
V28 CM or 16 FDX connections 50 to 200 bits per second with TTL compatible interface. It requires the following d.c. supplies:
$+5 \mathrm{~V} \quad 1.4 \mathrm{~A}$
$-18 \mathrm{~V} \quad 0.05 \mathrm{~A}$
Control module for 64 lines (32 in-32 out )with interface according to CCITT V24/V28 recommendations. It requires the following d.c. supplies:
$+5 \mathrm{~V} \quad 3.0 \mathrm{~A}$
$+18 \mathrm{~V} \quad 0.16 \mathrm{~A}$
$-18 \mathrm{~V} \quad 0.16 \mathrm{~A}$

Modular I/O System (MIOS)
MIOS is a separate rack mounting system (see Appendix for handbook) for connecting the system to the GP bus.

Control unit (PC 1207/00 type M5D) for a basic modular input and/or output system of up to 16 modules.

Digital I/O system (DIOS)
DIOS is supplied using the following Dual Input Output Digital (DIOD) boards:

| P837-001 | Digital input output control unit providing: |
| :---: | :---: |
| DIOD | - 1 gated 16-bit input word (including level |
| (type 1) | adaptation) |
|  | - 1 buffered 16-bit output word (including level adaption) |
|  | - 1 call line per word |
|  | - 1 response line per word |
|  | - TrL level connection |
|  | It requires the following d.c. supply: |
|  | +5V 2.25A (when used without output resistors) |
|  | 3.2A (when used with output resistors) |
| P837-002 | Digital input output control unit providing: |
| DIOD | - 2 gated 16-bit input words (including level |
| (type 1) | adaption) |
|  | - 2 buffered 16 -bit output words (including level adaption) |
|  | - 1 call line per word |
|  | - 1 response line per word |
|  | - TTL level connection |
|  | It requires the following d.c. supply: |
|  | $+5 \mathrm{~V} \quad 3.5 \mathrm{~A}$ (when used without output resistors) |
|  | 5.3A (when used with output resistors) |

Table 3.1
I/O Channel Alternatives for Controllers

| Type Number | Description | Prog. Channel | I/O Processor | Interrupts | No of Device Addresses |

| P831-040 | M.T. 800/1600 | - | Yes (tran) | 1 | 4 |
| P833-152 | Cass. T. | Yes | Yes | 1 | 3 |
| P837-001 | DIOD 2W | - | - | 1 | 1 |
| P837-002 | DIOD 4W | - | - | 2 | 2 |

- not supported by standard software yes - supported by standard software
(1) These CU'S are not supported by standard software as the use of them depends on the application

This chapter describes the facilities provided for extending the GP bus outside the basic mounting box. Details are provided for datacommunication cables and panels, extender cards to aid testing, card connectors and general purpose $I / 0$ cards for customer - designed circuits. Equipment shelves and modular power supplies are also described.

Cards and Connectors.
P843-025 General purpose card with GP bus control logic for
(type 1) customer-designed control circuit. Includes male connectors for bus and device (2 connectors) connection, and has space for 125 ( $14 / 16$ pins) dual in-line-packages and 2 (24/40 pins) MSI,LSI packages. For connection of a device cable a female connector must be used (use p843-021). It requires the following d.c. supply:

```
+5V 1.0A (bus control logic only).
```

P843-026
(type 1)

P843-021

P843-022
P843-027

P843-028

Female connector with 74 pins for connection of $a$ device cable to an $I / O$ card (GP card, Digital I/O card).

As for P843-021 but with 26 pins.

Set of 10 emitter and 10 receiver packages. Required for a customer who is designing an interface to the GP bus.

Set of 10 bridge adaption networks (Ternet packages each of which terminate 14 signal lines). Required

Use of Extenstion Card P843-035

| P849-006 | Female Connector (50 pins) for device connection to Type 2 card. |
| :---: | :---: |
| P849-006 | Female Connector ( 74 pins) for input isolator card P839-004. |
| Extenders and Adaptors |  |
| $\begin{array}{r} \text { P843-007 } \\ \text { (type 2) } \end{array}$ | Bus translator card including 3 metre cable. Used to translate signals on I/O bus into signals for GP bus. The card is always supplied as part of equipment shelf P843-002. <br> It requires the following d.c. supply: $+5 \mathrm{~V} \quad 1.0 \mathrm{~A}$ |
| $\begin{gathered} \text { P843-008 } \\ (\text { type 2) } \end{gathered}$ | Bus translator/terminator card including 3 metre cable. Identical to P843-007 but also provides termination resistors for terminating the GP bus. The card is always supplied as part of equipment shelf P843-003. <br> It requires the following d.c. supply: $+5 \mathrm{~V} \quad 1.9 \mathrm{~A}$ |
| P843-009 | ```Bus terminator to be used in equipment connected at end of the GP bus, where the bus requires terminating. e.g. Equipment Shelf P843-001 used at the end of bus. It requires the following d.c. supply: +5V 0.9A.``` |
| P843-115 | GP bus extension cables (flat cable $2 \times 50$ way each) with connectors~overall length3.0 metre. |
| P843-031 | Break lines requests cable ( 8 break request sigmal lines plus 8 signal earth lines), <br> - overall length 3 metre. |
| P843-037 | Cable for connection of a V24 interfacing device to the serial control units P840-002 or P845-040. Includes Cannon connector and control unit con-nector-overall length 10 metre. |

## Maintenance Equipment

P843-035 Extension card for testing P852M central processor card.

P843-135 Extension card for testing P852M type 1 control unit cards and I/O processor cards.

Portable control panel for P852M which is used mainly for maintenance and servicing. This is a free standing panel fitted with the same controls as a full control panel and with a flying lead and connector to enable it to be fitted in place of the full control panel.

## Power Supplies

The power supplies for the system are mainly contained within the units supplied.

When using equipment shelf P843-001, which holds I/0 cards type 1, the power supply is included with the shelf. When using equipment shelves P843-002/003 however, which hold I/0 cards type 2 an extra power supply unit P843-011 or a D.C. Converter P849-034 can be ordered with the shelf dependent upon the type of cards fitted. See details under separate headings for these unitse

Where a self contained control unit is formed from cards (type 2) contained within a multicard equipment shelf rectifiers RD1 or RD2 with stabilizer RG4 can be housed in the shelf to provide power for the neighbouring I/O Cards (See Figures 4.1. and 4.2).

Details of all power supply modules are as follows:

P843-011 Power supply unit which can be mounted in a dedicated location in equipment shelf P843-002 or P843-003. The unit consists of rectifier RD2 and stabilizer card RG3 which provide the following d.c. supplies for digital I/O equipment:

$$
+24 \mathrm{~V} \quad 1.5 \mathrm{~A}
$$

$+5 \mathrm{~V} \quad 4 \mathrm{~A}$
$-5 \mathrm{~V} \quad 0.5 \mathrm{~A}$
P849-034
D.C. converter which can be mounted in a dedicated location in equipment shelf P843-002 or P843-003. It provides from an input of +5 V at 2.5 A the following d.c. supplies for data-communications equipment:

| +6 V | 0.5 A |
| :--- | :--- |
| -6 V | 0.25 A |
| +12 V | 0.08 A |
| -12 V | 0.1 A |

For the multicard equipment shelf rectifier RD1 or RD2 with stabilizer card RG4 provide outputs of $+5 \mathrm{~V}, 7.6 \mathrm{~A}$ and $-5 \mathrm{~V}, 0.5 \mathrm{~A}$.

The power supply always included with shelves P843-002 or P843-003 consists of rectifier RD3 and stabilizer card RG5 which provide an output of $+5 \mathrm{~V}, 7.6 \mathrm{~A}$. The stabilizer provides also overvoltage protection.

## Equipment Shelves

The equipment shelves are designed to fit into standard 19 inch racks - see Part 4 Cabinetry for mounting details.

The adaption of the power supplies within the shelves for various mains voltage levels is described in Chapter 5 Mains Conversion and the switching arrangements for local and remote control of the shelves in Chapter 6 Local and Remote Control of d.c. Supplies.

## Multicard Control Unit Equipment Shelf

Self contained equipment shelf (see Figure 4.1.) complete with wiring, connectors, fans, and local or remote on/off control for:

- Bus translator card P843-007 or 008
- 4 I/0 cards (type 2)
- 1 rectifier (RD1 or RD2)
- 1 stabilizer (RG4)

Front Panel height $=3$ standard rack units.
Note: This shelf is used in the system to form control unit P831-040 for 4 M.T. transports P831-102, 104 or 106.

P843-001

Equipment shelf (see Figures 4.3 and 4.4.) with space for 6 I/O cards (type 1). Includes power supply $+5 \mathrm{~V}, 18 \mathrm{~A} ;-18 \mathrm{~V}, 1 \mathrm{~A} ;+18 \mathrm{~V}, 1 \mathrm{~A}$; telescopic slides, bus cable 3.0 metres and bus connector. When connected to the end of the GP bus a terminator P843-009 must be added.

Front panel height $=3$ standard rack units.
Equipment shelf (see Figures 4.5 and 4.6) with space for 8 I/O cards (type 2), clock pulse card (P848-001) or D.C. converter (P849-034) and one extra supply unit (P843-011). The shelf includes a bus translator (P843-007) with 3.0 metre cable and a $+5 \mathrm{~V}, 6.6 \mathrm{~A}$ power supply (RD3 + RG5).

Front panel height $=5$ standard rack units.
Equipment shelf as described for P843-002 but fitted with a bus translator/terminator (P843008) with 3.0 metre cable and a $+5 \mathrm{~V}, 5.7 \mathrm{~A}$ power supply. This shelf is for use at the end of the GP bus.

Front panel height = 5 standard rack units.

| P849-029 | MODEM panel for the external connection of 16 synchronous/asynchronous controllers; Cannon type of connectors.Panel height 89 mm ( 3.5 inches) $=2$ standard rack units. |
| :---: | :---: |
| P849-130 | Panel for visualising up to 32 DATA SET READY" signals. |
| P849-230 | Display equipment with cable and connectors for 8 DATA SET READY'signals; cable length 3 metre. Also required P849-029 and P849-130. |
| P849-524 | Cable between modem panel P849-029 and line control unit P847-060,P847-070,P846-060, or P846-070 for 1 FDX or 1 HDX; Cable length 3 metre. |
| P849-534 | Same as P849-524 but including visualisation signal for option P849-230 |
| P849-624 | Cable between modem panel P849-029 and line control unit P845-060 for 4 HDX or FDX; cable length 3 metre. |
| P849-634 | Same as P849-624 but including visualisation signal for option P849-230 |
| P849-724 | Cable between line control unit P845-070 and modem panel P849-029 for 4 device connections; cable length 3 metre. |
| P849-734 | Cable between line control unit P845-070 and 4 external equipments (open ended); cable length 5 metre. |
| P849-824 | Cable between line control unit P844-110 and external equipment (open ended) 16 input and 16 output lines; cable length 5 metre. |
| P849-346 | Cable between modem panel P849-029 and modem according to CCITT recommendation V24,includes one connector for connection to the modem panel; cable length 5 metre. |

| P849-924 | ```Cable between line control unit P844-060 and 8 external equipments (open ended);cable length 5 metre.``` |
| :---: | :---: |
| P849-336 | Cable between modem panel P849-029 and modem according to CCITT recommendation V24,includes one connector for connection to the modem panel; cable length 5 metre. |
| P849-901 | Diagnostic equipment for SLCU 2S, SLCU 4,ALCU4/2, AMA 8A controller types. Requires also P849-029. |
| P849-920 | Test tool for AMA 16. |
| P849-925 | Test tool for V28 CM. |
| P849-930 | Test tool for AMA 8C. |
| P849-940 | ```Cannon connector (male) 25 pins (including hood straight clamp).``` |
| P849-941 | Cannon connector (female) 25 pins (including hood straight clamp). |

FIG. 4.6 EQUIPMENT SHELF P843-002/003 AC and DC DISTRIBUTION

Adapting the power supply of the basic mounting box and the equipment shelves to suit different levels of mains voltage is achieved by altering the tappings on the mains transformers of each unit.

For basic mounting boxes (M100,M200,M400 and M500 Series) equipment shelves P843-001 (E2), and P833-152 cassette equipment shelves the tapping arrangements are as shown in Figure 5.1 and the physical location of the transformers as shown in Figures 5.2. and 5.3.

For equipment shelves $\mathrm{P} 843-002$ or $\mathrm{P} 843-003$ and for the multicard control unit shelf the transformer tappings are shown in Figure 5.4. and the physical location of the transformer in Fig. 5.5.

FIG. 5.1 TRANSFORMER TAPPINGS (M100|200|400|500, P843-001 and P833-152)

Control panel (or equipment shelf front panel)

Example shows
1inks for 220 V
mains input

To reach transformer
tappings:

1. Remove top rear cover ( 4 screws)
2. Remove power supply card (4 screws) and connector
3. Remove spacing plate (3 screws)

FIG. 5.2 TRANSFORMER LOCATION (M100, M200 SERIES, P843-001 and P833-152 EQUIPMENT SHELVES)

FIG. 5.3 TRANSFORMER LOCATION (M400, M500)

FIG. 5.5 TRANSFORMER LOCATION (MULTICARD CONTROL UNIT EQUIPMENT SHELF and P843-002/3)

P857M POWER SUPPLY LOCATION - GENERAL VIEW

The P843-001 equipment shelf (with space for 6 I/0 cards - type 1), the P843-002/003 equipment shelves (with space for 8 I/0 cards type 2), and the P833-152 equipment shelves (for 3 cassettes) are all equipped with the facility for local or remote control. The equipment shelf, for self contained multicard control units - type 2, can also be equipped with this facility. The interconnections for remote control are shown in Figure 6.1. and the control circuits for local/remote operation are shown in Figures 6.2. and 6.3.

FIG. 6.1 REMOTE CONTROL INTERCONNECTIONS
Figure 6.2. shows the control circuit used in equipment shelves P843-001, P843-002 and in P833-152. In operation the supply to the equipment shelf mains transformer is connected either via a LOCAL/REMOTE switch, when the switch is in the LOCAL position, or via a solenoid operated switch which is controlled and operated with a +5 V control signal derived from the $\mathrm{P} 852 \mathrm{M} / \mathrm{P} 856 \mathrm{M}$ or P 857 M basic
mounting box power supply.

The control circuit incorporated in a multicard control unit equipment shelf also includes ON/OFF switches as shown in Figure 6.3. When the selector switch is set to LOCAL (with the mains switch set to ON) the supply is connected to the mains transformer and internal d.c. supplies are obtained from the unit whether or not the +5 V control signal is present. The $O N$ and $O F F$ switch have no effect on the circuit under these conditions.

When the selector switch is set to RENOTE the mains supply to the transformer is controlled via a contact of relay Re 4. This relay is energised if the +5 V control signal is present, thus applying the mains supply to the transformer via the relay contact, and is deenegised if the +5 V control signal is absent, thus removing the mains supply from the transformer.

Also in the REMOTE position, and with the +5 V control signal present the d.c. supplies can be switched off and on by means of two biased push buttons adjacent to the selector switch. If the OFF push button (biased off) is pressed relay Re3 is energised and removes the +5 V control signal from Re4 (via contacts 8 and 9 of $\operatorname{Re} 3$ ). Relay $\operatorname{Re} 3$ is then held operated via its own contacts 6 and 7 and via the ON switch. If the ON button (biased on) is then pressed relay Re3 is released and relay $\operatorname{Re} 4$ energised once more to restore the mains supply to the transformer. If the OFF push button has been operated the control circuit is reset (Relay Re3 de-energised) if the +5 V control signal is then switched off. The mains supply to the equipment shelf transformer is then restored when the +5 V control signal comes on again.
